

How to Migrate from Legacy Wallet to BIP44 Wallet

Step 1: Download the latest Zelcore

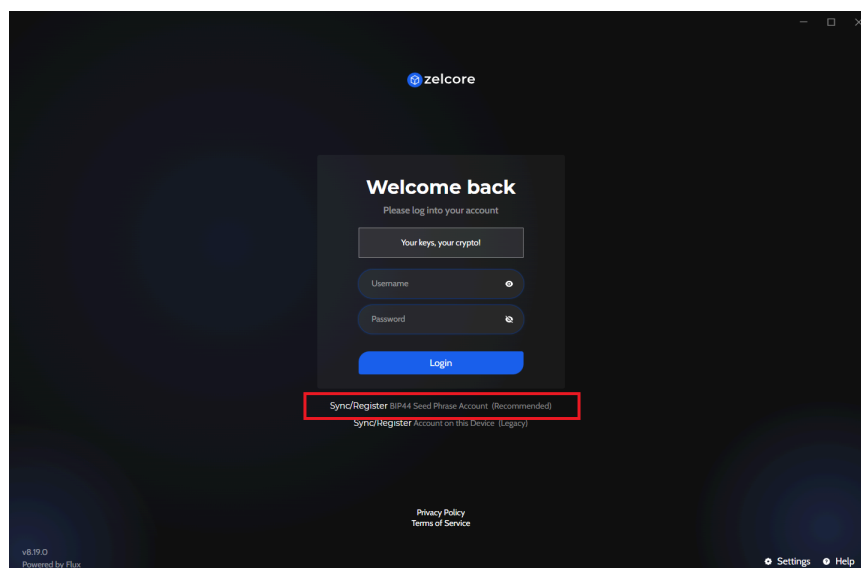

Get it from the official website: <https://zelcore.io/>

Step 2: Install Zelcore

Install the latest Zelcore on your preferred device. You can use the same device as your legacy Zelcore or a different one—whichever is more convenient.

Step 3: Create your BIP44 account

Open Zelcore and choose **Sign/Register with BIP44 seed phrase account** on the welcome screen.

Step 4: Secure your seed phrase

Follow the instructions to generate your 24-word seed phrase.

Write it down and store it securely—do **not** copy/paste it into a document on your computer.

Step 5: Add your assets

In BIP44 Zelcore, add all the assets you'll be migrating.

Step 6: Get your new receive addresses

Either:

- Copy the addresses to yourself from BIP44 Zelcore, or
- Enable the camera on your legacy device and scan the QR codes from BIP44 Zelcore.

Step 7: Move your funds

From your legacy Zelcore, send your assets to your BIP44 Zelcore addresses.

Always test with a small amount first.

Step 8: Migrate your nodes

In legacy Zelcore:

- Delete each node one at a time from the Nodes app.
- Immediately send the collateral to your BIP44 Flux wallet.
- Repeat for all nodes.

In BIP44 Zelcore:

- Set up each node in the FluxNodes app and wait for 100 confirmations.

Step 9: Update your node details

- **Arcane nodes:** In the console → Options menu → Reconfigure Node → Reboot Node.
- **Legacy nodes:** In Multitoolbox: run Option 11 (Replace Zel ID), then Option 8 (Update TX ID), then reboot the node.

Step 10: Start your nodes

In the BIP44 Zelcore FluxNodes app, press **Start** for each node.

Titan Staking:

1. Once the lock period ends, your stake will appear in the **Expired** section and will be available for redemption. Make sure the **auto-reinvest** feature is not selected.
2. Select **Redeem**, choose the **Redeem Address**, and sign the redemption. Funds are processed on Thursdays and Sundays. Wait for the developers to complete the multi-signature process. Once your funds are available, send them to your new wallet. Export all transactions as a CSV file for documentation.
3. You may restake on Titan using your BIP44 wallet if desired.
